Experiment : 1

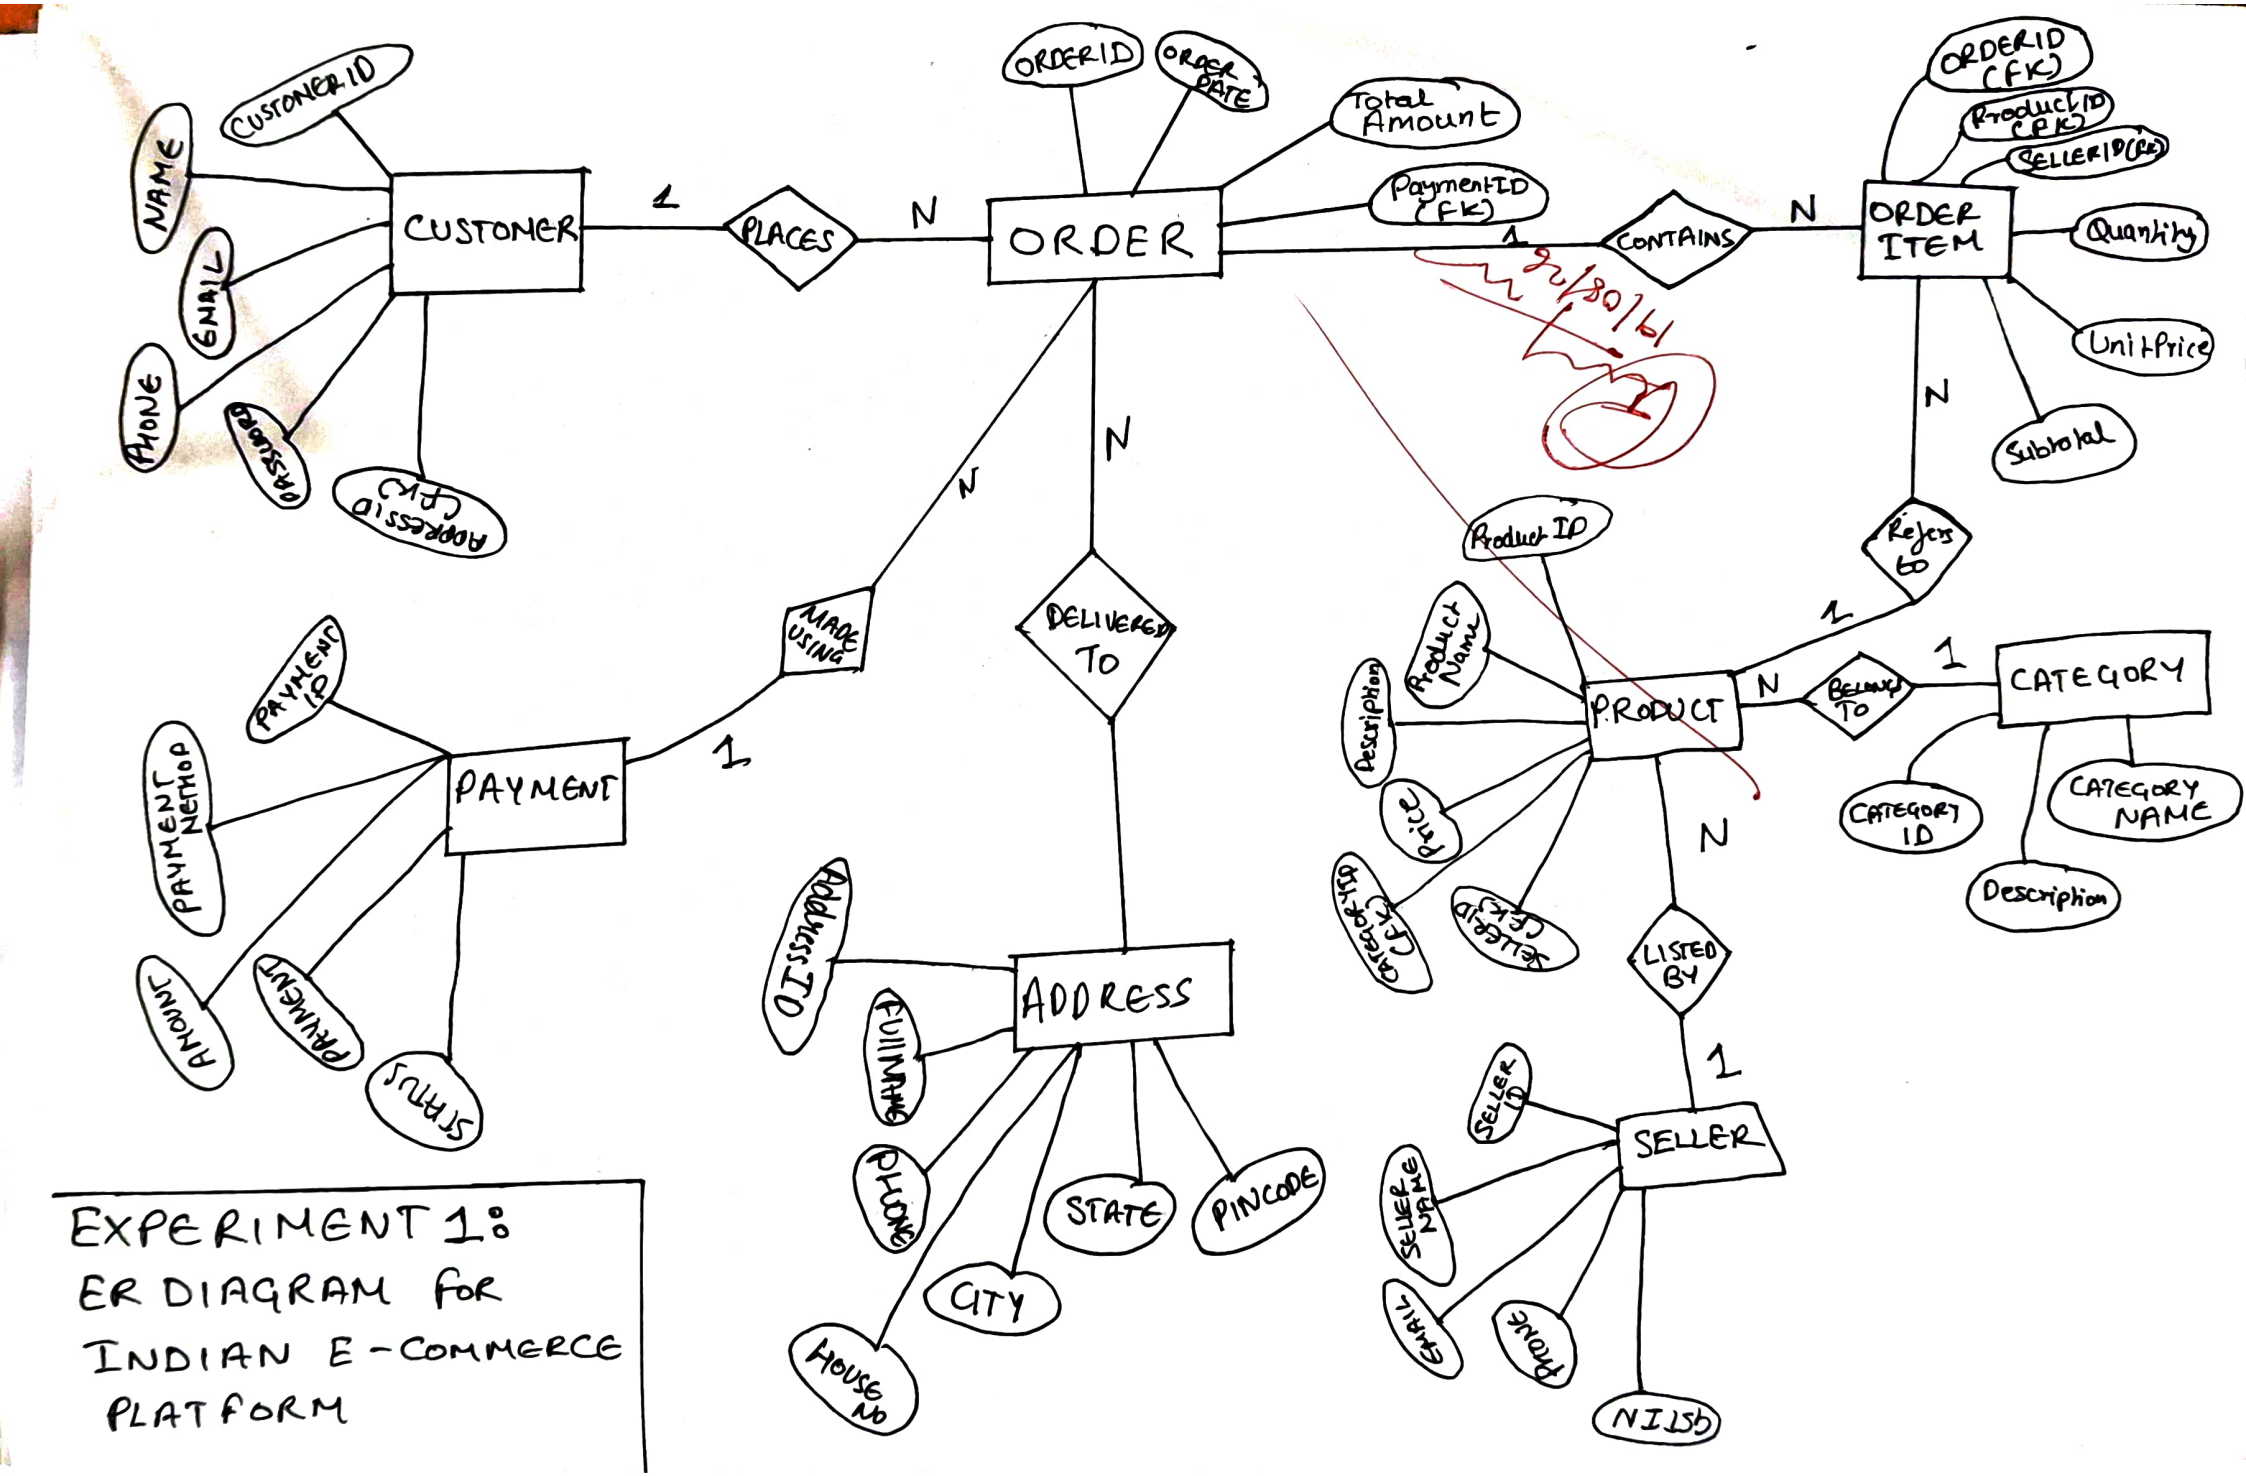

Aim : To design an Entity - Relationship (ER) diagram for an Indian E-commerce Platform and Identify entities, attributes, relationships and cardinalities.

OBJECTIVES : To identify entities involved in a e-commerce system.
To identify attributes and primary keys of each entity.
To establish relationships between entities.

Entities:
- Customer
- SELLER
- PRODUCT
- CATEGORY
- ORDER
- ORDER_ITEM
- PAYMENT
- ADDRESS

CARDINALITY:
- Customer → ORDER = 1:N
- ORDER → ORDER_Item = 1:N
- CATEGORY → PRODUCT = 1:N
- SELLER → PRODUCT = 1:N
- CUSTOMER → Address = 1:N
- Payment → Order = 1:1
- Address → Order = 1:N

Result:
The ER diagram for the Indian E-commerce Platform was successfully designed by identifying the required entities, attributes, relationships, and cardinalities.
